

836C / 836C AWD / 856C / 856C AWD

CASE
CONSTRUCTION

GRADER

C Series - STAGE V

ACROSS HISTORY

1842

CASE is founded.

1867

Eisenwerk Gebruder Frisch KG was founded.

1926

Road building equipment production.

1934

The First Frisch grader is also the first european motor grader.

1936

Dedicated Frisch road building plant in Kissing.

1967

First automatic blade guidance based on ultrasonic system.

1970

Articulated frame introduction.

1972

AWD introduction.

1977

Frisch company acquired by Faun.

1982

Encapsulated slewing ring introduction.

1986

Faun grader operations acquired by Orenstein and Koppel (O&K).

1996

Load Sensing hydraulic system introduction and grader production moved to Berlin.

2000

High visibility engine hood design introduction.

2005

FPT engines introduction and 6 cylinder installation on 13 t grader.

2010

All around visibility cab introduction.

2013

Low Profile cab introduction.

2015

CASE branded graders enter the European Market.

2020

Case launches EU Stage V.

POWER TO THE GROUND

LOW EMISSIONS

FPT Stage V

To maintain the advantages of the unique and unbeaten HI-eSCR technology, FPT Industrial integrated a maintenance free device on its SCR catalyst, thus allowing to comply with tightened limits on PM emissions within a compact package. This allows for a very compact engine compartment, resulting in excellent rear visibility. In addition, the maximum temperature reached during normal operating conditions by HI-eSCR 2 is still on average 200° C below a traditional particulate filter.

FPT's Stage V Solution:

- + High Performance
- + Low Operating Costs
- + Ease of Use

HI-eSCR2

DUAL POWER CURVE

Get more productive at higher speed

The engine is completely application-engineered to power motor graders which require fast torque response to keep high productivity levels. For even higher performances the Dual Power maximizes operation at higher speed thanks to the power curve flattening from 4th gear.

SAFE AND EASY MAINTENANCE

Never so undemanding

Daily maintenance operations have never been so undemanding: all the main check points, on the left hand side of the machine, are easily reachable from ground level. The tandem mudguards are conceived to be the most functional and safer places to fulfil periodical maintenance operations like the air filter cleaning or the oil refill. The smallest aftertreatment package in the market doesn't impact the engine layout sharpness: the emergency maintenance operations will then be faster and less expensive.

CLEAN POWER, MAXIMISED PRODUCTIVITY

ERGOPOWER TRANSMISSION WITH TORQUE CONVERTER

Jerk free shifting

The automatic shifting function eases the operator concentration and optimizes the machine performances letting the grader engine work on the most productive area of the power curve. The function combined with the torque converter never reaches the power unit stall, making the real difference from competitors in the grader sector. 100% automatic diff. Lock: the automatic «no-Spin» differential instantaneously transfers the torque from the slipping tyre to the wheel with better grip. The system doesn't require any driver intervention allowing the operator to be focused on the blade movement control.

AWD WITH CREEP MODE DRIVE

Precise at any speed

Creep mode on AWD models: 2 machines in one, the hydrostatic creep mode makes the front speed virtually independent from the engine revolutions: therefore the grader can be used in compaction application reducing the overall fleet deployed in road construction. Independently from the transmission chosen, 4 WD or 6WD, the 836C can be also equipped with 24" tyres: the ideal solution on uneven soils and when a low tyre bumping effect is required.

REVOLUTIONARY TECHNOLOGY

ROLLER MOUNTED ENCAPSULATED SLEWING RING

Zero friction engineering solutions

Moldboard design revolutionizes and maximizes controllability: very low friction developed during operation, jolt-free high rotation torque for a very smooth and accurate blade rotation and steadiness.

The slewing ring is mounted on roller bearings activated by internal gearing avoiding backlash, wear and supporting high mechanical strain.

The exclusive moldboard design, with fewer greasing points, reduces the daily maintenance drastically.

During the machine service life, periodical substitution of wear inserts is not required cutting down overall maintenance costs.

“A-SHAPE” FRAME

Stress free structure

The “A-Shape” structure constantly compensates the efforts while working. The typical lateral stress on off-set position are virtually eliminated for longer operating life. The saddle can be hydraulically set on 5 different positions very easily thanks to a pin lock system; the exclusive moldboard geometry enables the operator to rotate the blade over 90° for each working side without any mechanical interference.

MULTI-RADIUS BLADE

Easy material rolling

The infinitely variable radius blade reduces the traction effort, and in finishing operations improves the material mixing effect.

EXTREME PRECISION

LOAD SENSING HYDRAULIC SYSTEM

Flow at your fingertip

The new CASE graders have the most precise hydraulic circuit in the market. With highly responsive and precise controls, the load sensing hydraulics make any operation easy and smooth. A directly activated axial piston pump delivers only the required amount of oil where it is needed, avoiding any power waste. The Control valves provide pressure compensation enabling the moldboard to be lifted or lowered in parallel. A dedicated switch installed on the cab floor allows the operator to obtain maximum output from the hydraulic circuit, independently from the engine revolutions, for faster reactions (Full Flow mode).

DIRECTLY MOUNTED CONTROL LEVERS

Banning power waste, spinning productivity

The exclusive hydraulic block, directly controlled, reduces any lever free play over the entire grader life, meanwhile the operator can benefit from a direct feed-back of the hydraulic system increasing the working accuracy. The float function, available as an option, lets the oil flow unobstructedly in the cylinders so to let the moldboard naturally follow the ground contour. Independently from CASE certified high quality components, this exclusive hydraulic system has been conceived to ensure always unbeatable performances, fuel saving, reliability and grader controllability.

SITECONTROL PREDISPOSITION

BLADE CONTROL SET UP

Flexible performance

The CASE “800 series” grader can be equipped from factory completely prepared for the most commonly used blade control solutions. The unit is delivered to the customer with the basic sensors, cables and supports. It’s a real “plug and play” solution: the customer has just to install the specific additional sensors needed for 2D or 3D blade control together with the display in the cabin and the blade control system is ready to work. The SiteControl preparation kit is compatible with different types of blade control systems: Sonic, Laser, GPS or Universal Total Station. The automatic blade control system allows even a less skilled operator to get a higher and more constant output from the CASE Grader, this helps to get the job done faster meaning fewer passes and always the right amount of material moved. Also an experienced operator will benefit from the system and is able to work faster and more independently. Consequently, grader operational costs which involves fuel, machine hours and maintenance are reduced. With a CASE SiteControl preparation each customer can easily switch components from an other construction machine. Allowing components to be used wherever they are needed and have maximum utilization of the investment. The installation of main components in factory provides an easier accessibility and consequently faster maintenance service: this is a guarantee of high manufacturing standard.

COMFORT RULES

REAR MOUNTED CAB

Aligned with performance

The rear mounted ROPS/FOPS cab offers a highly valuable advantage in comfort and convenience:

- + Operators are aware of the articulation angle at all times
- + The rear located cab improves visibility on the moldboard
- + The cab weight carried on the rear frame emphasizes the machine traction
- + Pneumatic and heated seat offered as a standard strengthens operator well-being at work

The wide tinted glass mounted on the front and on the side of the cab provides unobstructed all-around visibility. Even when the driver is working seated, he can have full moldboard visibility till its heel angle. The safety too is improved:

- + The new rear view camera guarantees a safer rear visibility and an excellent operator comfort. The driver doesn't have to turn back anymore when he has to drive the machine backward.
- + Any obstacle can be easily recognized from a quick look at the wide 7" color screen.

LOW CAB PROFILE

A new Cabin equipped with all "mod cons"

Finally, CASE offers an elegant low profile cab on its graders providing best-in class comfort and visibility while reducing the machine's total height of 180mm, so that there are no transport limitations.

THE ART OF VERSATILITY

HIGH VERSATILITY

Tools for every task

CASE graders can be completed with a wide variety of fittings making them suitable for a great number of applications:

- + 3 customizable moldboard widths for each model to easily adapt the pushing power to different material density and working conditions
- + Different Moldboard extensions for better lateral material retention in fine grading
- + Moldboard overload clutch to preserve frame and moldboard from any unexpected collision, recommended in forestry applications
- + Moldboard scarifier for easier light soil preparation in a single pass
- + 3 or 5 teeth ripper to better scarify the sturdier soil roots
- + Front blade for faster dozing operations and for improved productivity in combination with the central blade thanks to the engine power high level
- + Specific front counterweight: better machine balance and higher tractive effort
- + Rear hydraulic set up providing the right oil flow for additional implements such as compactors, it represents the ideal combination with the exclusive creep mode
- + Fuel tank refill pump: easier daily tank refill in any working environment
- + Additional lights packages:
 - on the rear counterweight
 - on the lower part of the cab for higher light intensity on the moldboard

PERSONAL ASSISTANT FOR FLEET MANAGEMENT

THE SCIENCE BIT

The CASE SiteWatch telematics system uses a high-tech control unit mounted on each machine to collate information from that machine and from GPS satellites. This data is then sent wirelessly through the mobile communication networks to the CASE Telematics Web Portal.

SITWATCH: CENTRALISED FLEET CONTROL BENEFITS AT YOUR FINGERTIPS

Measure your true asset availability and optimise it

- + Eliminate the “phantom fleet”: SiteWatch allows to identify spare units or under loaded machines on each site.
- + Become able to reallocate units where they are more needed.
- + Forward maintenance planning is easier since the actualised working hours are always available.
- + Extend the benefits of SiteWatch to the rest of your fleet: SiteWatch can be installed on the units of other brands as well.

Challenge your Total Cost of Ownership!

- + Being able to compare the fuel usage of different machine types will allow you choose the right equipment.
- + Save on transport costs with planned and grouped maintenance tasks.
- + Peace of mind, optimised uptime and lower repair costs: with preventive maintenance you can for example be alerted if the engine needs to be serviced and avoid disruptive breakdown.
- + Be able to compare your asset Return on Investment on different sites.
- + Your equipment is used only during working hours. You can set up alerts so that you know if it is in use during the weekend or at night.
- + Integrate with the programmed maintenance package, which ensures the required services are performed at the right time.

More safety, lower insurance premium

- + Keep thieves away: dissuade them from attacking your asset because it is geo-localised. SiteWatch is hidden so that thieves can't find it quickly.
- + Your fleet is used only where you decide. You can define a virtual fence and receive an email when a machine exits that perimeter.

MAIN REASONS TO CHOOSE THE C-SERIES

HIGH VERSATILITY

The wide variety of options offers, to any customer, the possibility to create a tailored grader suitable for the most demanding applications.

LOAD SENSING HYDRAULIC SYSTEM

The balanced flow for all applications and for simultaneous moldboard movements.

SAFE AND EASY MAINTENANCE

The easy serviceability is part of CASE DNA: all the main checks can be easily performed from the wide and safe tandem fenders; all the service points are conveniently grouped and positioned.

«A-SHAPE» FRAME

An optimized effort distribution in any condition ensures long operating life.

BLADE CONTROL PREPARATION

Leading brands plug and play blade control system.

MULTI-RADIUS BLADE

Lower power absorption and optimized rolling effect.

ROLLER MOUNTED, ENCAPSULATED SLEWING RING

Maintenance free technology and effortless moldboard rotation.

LOW EMISSIONS

- + With the advanced, unique and unbeaten «HI-eSCR» technology, up to the new Stage V.
- + Additional maintenance free device on its SCR catalyst, allows to comply the tightened limits on PM
- + Low fuel consumption at full power

LOW PROFILE CAB

Less 180 mm transport height / transport on trucks below 4 mt.

REAR MOUNTED CAB

Best in class controllability and comfort: the operator is always in line with the working direction.

DIRECTLY MOUNTED CONTROL LEVERS

Better moldboard control over the years, no free play between levers and main control valve.

ERGOPOWER TRANSMISSION WITH TORQUE CONVERTER

Smooth shifting for perfect controllability and automatic mode for stress-free operations.

AWD WITH CREEP MODE DRIVE

Full traction in any condition and optimized torque transfer adapted to operator needs.

DUAL POWER CURVE

Higher power rate at high speed (4th gear) increases the grader productivity.

FAST ATTACHMENT CHANGE OVER

- + Mechanic or hydraulic quick coupler
- + Connect Under Pressure (CUP) system to plug hydraulic hoses with no wrenches

836C 836C AWD

SPECIFICATIONS

ENGINE STAGE V "Hi-eSCR2"

Maximum Power (ISO 14396/ECE R120)
 From 1st to 3rd gear _____ 102 kW/138 hp
 From 4th to 6th gear _____ 115 kW/156 hp
 Governed _____ 2100 rpm
 Make & model _____ FPT N67 NEF 6 cyl.
 Aftertreatment system _____ DOC+SCRoF
 Donaldson air filter with dust ejector _____ std
 Type __ diesel, common rail, dual power, turbocharged
 and intercooler
 Displacement _____ 6.7 l
 Number of cylinders _____ 6
 Bore & stroke _____ 104x132 mm
 Maximum torque at 1400 rpm _____ 725 Nm
 Remote engine oil filter for easy replacement
 - 25°C outside temperature start as standard equipment.
 The engine complies with (EU) 2016/1628
 regulations STAGE V.

TORQUE CONVERTER

Single-stage torque converter integrated into shift gearbox
 Automatic matching of output torque to changing travel
 conditions
 Converter ratio _____ 1.87: 1
 Cooling by heat exchanger

TRANSMISSION

Full powershift transmission with 6 forward and 3 reverse
 gears.
 Electric single-lever shift with reverse-lock in ranges 3-6.

Speeds in km/h

GEAR	FORWARDS	REVERSE
1.	5.4	5.7
2.	8.3	13.3
3.	12.6	29.2
4.	19.2	-
5.	27.9	-
6.	39.9	-

Tractive effort (adherence coefficient 0.8)
 836C _____ 66 kN
 836C AWD _____ 85 kN

AXLE FRONT

Oscillating axle with wheel spindle steering and hydraulic
 wheel lean adjustment

	836C	836C AWD
Axle oscillation	± 15°	± 15°
Wheel lean	± 21.45°	± 21.45°
Ground clearance	485 mm	485 mm

AXLE REAR TANDEM

CASE tandem grader axle with automatic
 No-Spin differential
 Oscillating tandem drives with heavy-duty roller chains
 Planetary reduction
 Oscillation _____ ± 15°
 Tandem box dimensions:
 Height _____ 599 mm
 Width _____ 201 mm
 Wall thickness _____ 20 mm
 Chain pitch _____ 50.8 mm
 Tandem wheelbase _____ 1241 mm

ALL WHEEL DRIVE

Selectable in addition to the hydrodynamic rear-wheel
 drive. Hydrostatic front-wheel drive with E.D.C.V.
 (Electronic Drive Control Volume). A bi-directional swash
 plate pump (forward/reverse) drives wheel-hub mounted
 motors in each of the front wheels. Hydraulic No-Spin
 differential prevents one-sided wheel spin and proportions
 torque when cornering. A microprocessor monitors and
 matches front- and rear-wheel drive forces. A stepless
 switch allows the operator to adapt front-wheel thrust to
 existing job conditions. Creep mode as standard: front
 traction only, for ultra low machine speed.

BRAKES

Hydraulic, dual-circuit accumulator pump braking with 4 oil
 bath disc brakes acting on tandem-wheels. Parking brake:
 disc brake acting on transmission.

STEERING

Operated from the adjustable steering and control console.
 Front-wheel spindle steering, all hydraulic, volume control.

	836C	836C AWD
Steering wheel lock. left/ right	40°	40°
Articulated frame with 2 double-flow steering cylinders: Articulation angle	± 28°	± 28°
Minimum turning radius: across tyres	6600 mm	6800 mm
across front blade	7300 mm	7600 mm

TYRES

405/70 R20 SPT9 Dunlop
 420/75 R20 XMCL TL Michelin

 405/70 R24 SPT9 Dunlop

XMCL MICHELIN

SPT9 DUNLOP

MOLDBOARD CONTROL

“Load Sensing” for maximising functions controllability. Control levers for precision metering of adjustment speed. Pressure compensation in each of the control valve units permits parallel moldboard lifting or simultaneous operation of two other functions, with no disruptive interaction. A pedal allows the operator to switch to max. output for faster functioning (Full Flow Mode). Unlockable check valves maintain lift/cutting angles and wheel lean cylinders constant.

A-FRAME

Robust welded box section A-frame.
L-profile cross section _____ 125x120x8 mm

SLEWING RING

Internal gearing, sealed roller-mounted, backlash-free, self-adjusting
Driven by hydraulic motor and moldboard mechanism
Diameter _____ 1150 mm
Action radius _____ 360°

MOLDBOARD

Multiradius wear-resistant, high-grade steel with hardened rounded guides. Replaceable, split main and side blades.
Width _____ 2440/3050/3355 mm
Blade height/thickness _____ 526/15 mm
Cutting edge height/thickness _____ 152/19 mm
Bolt diameter _____ 16 mm

MOLDBOARD SETTINGS

Shifting:
to the right _____ 491 mm
to the left _____ 708 mm
Reach across tyres w/o articulated steering:
right horizontal _____ 1865 mm
left horizontal _____ 1525 mm
Reach across tyres with articulated steering:
right horizontal _____ 2490 mm
left horizontal _____ 2150 mm
Max. slope angle:
right _____ 117°
left _____ 76°
Max. lift height above ground _____ 394 mm
Max. scraping depth _____ 456 mm
Cutting angle adjustment, hydr _____ 49.5°

HYDRAULIC SYSTEM

“Load Sensing” with variable displacement axial piston pump. Zero oil delivery under no-function conditions and hence power savings. Closed system with pressurised tank. Pressure relief valve.
Hydraulic pump _____ swash plate, variable displacement
Max delivery _____ 94.5 l/min
Max pressure _____ 200 bar
Pressure relief setting _____ 215 bar

FRAME

Front frame: stiff, welded section from high-strength, fine-grain steel
Cross-section _____ 270 x 270 mm
Wall thickness _____ 12 mm
Rear frame _____ torsion resistant frame
Cross-section _____ 220 x 260 mm

CAB

Elastically mounted, noise insulated ROPS/FOPS cab with two swinging doors. Either side access. Tinted glass. Rear-frame mounted cab. Heater/defroster nozzles. Heated and Air Suspended seat.
Low profile Cab option reducing overall grader height by 180 mm.
ROPS according to EEC sample testing _____ ISO 3471
FOPS according to EEC sample testing _____ ISO 3449
Cab noise level _____ 75 dbA
External noise level _____ 99 dbA

ELECTRICAL SYSTEM

Voltage _____ 24 V
Batteries _____ 2 x 100 Ah
Alternator _____ 90 A
Starter _____ 4 kW

CAPACITIES

litres
Lube oil _____ 12.5
Coolant (Including: cooler and Heater) _____ 32.0
Transmission (including converter and cooling) _____ 27.0
Axle gear _____ 31.0
Tandem _____ 120.0
Worm gear _____ 2
Hydraulic tank _____ 70.0
Hydraulic oil, total:

- + Blade control predisposition (Leica, Topcon, Trimble)
- + Front counterweight for 836C and 836C AWD (510 kg)
- + Front counterweight for 856C and 856C AWD (763 kg)
- + Tool box
- + Automatic lubrication system

Note: standard and optional equipment may vary by country. Consult your CASE dealer for specific details.

BUILDING A STRONG CASE.

Since 1842, at CASE Construction Equipment we have lived by an unwavering commitment to build practical, intuitive solutions that deliver both efficiency and productivity.

We continually strive to make it easier for our customers to implement emerging technologies and new compliance mandates.

Today, our global scale combined with our local expertise enables us to keep customers' real-world challenges at the center of our product development.

The vast CASE dealers' network is always ready to support and protect your investment and exceed your expectations, while also providing you with the ultimate ownership experience.

Our goal is to build both stronger machines-and stronger communities. At the end of the day, we do what's right for our customers and our communities so that they can count on CASE.
